

Sasha Chernyavsky

Senior Frontend Engineer · React / TypeScript

Toronto, ON • (416) 832-1789 • astreys@gmail.com • [linkedin.com/in/sasha-chernyavsky-831ab738](https://www.linkedin.com/in/sasha-chernyavsky-831ab738)

SUMMARY

Senior frontend engineer with 15+ years building large-scale, consumer-facing web applications — React and TypeScript across RBC, Citi, LoyaltyOne and Citco, and Vue 3 with TypeScript at CIBC today. I own components end to end: architecture, implementation, testing and the long tail of maintenance. Most of my work has been in regulated financial environments, where performance, accessibility, cross-browser reliability and analytics instrumentation are requirements rather than nice-to-haves. Comfortable leading a piece of work from planning through delivery, and working alongside back-end, design and product to get an interface right.

SKILLS

Core: React, TypeScript, JavaScript (ES6+), HTML5, CSS/SASS, responsive and cross-browser development

Ecosystem: Redux, Recoil, React Query patterns, Next.js, Node.js, REST APIs, D3, Material UI; Vue 3 and Pinia

Quality: Jest, React Testing Library, Vitest, Cypress, Selenium, ESLint, code review, TDD standards

Performance & UX: Web performance optimization, component architecture and design systems, accessibility (WCAG, AODA), analytics instrumentation

Tooling: Git, CI/CD, Webpack, Vite, npm, Figma, InVision, Jira, Confluence

AI-Assisted Development: GitHub Copilot, GitHub Spec Kit (spec-driven development), Claude Code

EXPERIENCE

CIBC Nov 2024 – Present

Senior Specialty Developer (Front End)

- Build client-facing sections of CIBC's digital banking in Vue.js and TypeScript, including a new login system, the client information section, and data sharing between client applications
- Contribute components to CIBC's corporate component library
- Deliver every feature to strict accessibility requirements, with analytics tracking built in
- Cover features with unit and end-to-end tests (Vitest, Cypress)
- Apply AI-assisted and spec-driven development (SDD) with GitHub Copilot and GitHub Spec Kit
- Verify releases through the CI/CD pipeline, confirming changes deploy correctly
- Contribute to team knowledge-sharing and how-to sessions

Stack: Vue.js, Pinia, TypeScript, SASS, Vitest, Cypress, GitHub Copilot, GitHub Spec Kit

RBC Jan 2023 – Sep 2024

Senior Front-end Developer

- Built and extended data-visualization components in React and TypeScript
- Developed advanced data-export functionality designed for large datasets
- Integrated front-end applications with .NET back-end APIs
- Translated InVision designs and wireframes into production-quality, maintainable code
- Delivered reusable, scalable UI components alongside business analysts, designers and back-end developers
- Participated in code reviews and troubleshoot performance and usability issues

Stack: React, TypeScript, .NET APIs, InVision

NielsenIQ Sep 2021 – Nov 2022

Senior Front-end Developer

- Replaced native Qlik components with custom solutions, significantly improving page load times and giving clients more customization
- Built visual data-presentation components integrating Qlik and Nebula.js
- Refactored main application views into fast, reusable components
- Extended the corporate Bootstrap component set for UI consistency across the platform
- Worked with designers to confirm technical feasibility and optimize components for implementation

Stack: AngularJS, JavaScript, Qlik, Nebula.js, Bootstrap

Citi

Feb 2020 – Sep 2021

Senior Front-end Developer

- Built a data-analytics widget in React that turns plain table views into interactive 2D/3D models with D3 and ForceGraph3D, making complex data easier to read
- Researched and developed a data-presentation layer on the ELK stack, optimizing data-processing workflows
- Improved widget performance and usability through testing and iterative refinement
- Worked with the back-end lead on API communication for the front end, making minor server-side adjustments to the endpoints feeding the ELK presentation layer

Stack: React, JavaScript, D3, ForceGraph3D, SASS, ELK (Elasticsearch, Logstash, Kibana)

LoyaltyOne (AIR MILES Reward Program)

Nov 2018 – Jan 2020

Senior Front-end Developer

- Led the migration from legacy AngularJS to React, backed by a RESTful API layer on Node.js microservices
- Built responsive React components for an offer-submission tool, with seamless switching between the mobile and web apps
- Developed D3 data-visualization components and image-processing features
- Created an HTML-to-PDF export tool for in-app document generation
- Supported and extended third-party components using TypeScript and Next.js, including the AIR MILES Store Chrome extension

Stack: React, TypeScript, Next.js, Node.js, D3

Citico Group

Aug 2015 – Nov 2018

UI/UX Front End Developer

- Senior member of an agile front-end team delivering a large-scale, data-driven platform for the financial sector
- Built a library of reusable React components for consistency and scalability across the platform
- Researched and built proof-of-concepts and prototypes to guide technical direction
- Developed data-driven charts and graphs with D3
- Introduced Jest/Enzyme for unit testing and Selenium for automated testing, establishing TDD standards that shortened development and QA cycles

Stack: React, D3, JavaScript, Jest, Enzyme, Selenium

Morneau Shepell

May 2013 – Aug 2015

UI/UX Developer

- Created UI/UX concepts and built them into web applications with AngularJS, HTML5 and Bootstrap
- Developed custom jQuery plugins that generate web forms dynamically from JSON feeds
- Brought markup into compliance with WCAG 2.0 and AODA accessibility standards

Canadian Tire

Oct 2011 – May 2013

Front End Web Developer

- Built new features and maintained legacy modules (JavaScript, jQuery, HTML, CSS), refactoring the presentation layer for reuse

Torstar Digital

May 2010 – Sep 2011

Web Developer

- Developed components and widgets, and migrated ASP Classic applications to .NET 3.5/4.0

INDEPENDENT PROJECTS

- [Plane Spotter Board](#) — real-time web app tracking aircraft on approach to an airport, filterable by airframe. Combines five public aviation data sources behind a single polling server that fans out over Server-Sent Events. TypeScript, Fastify, Vue 3, Vite; 360 Vitest tests; built with AI-assisted development
- [panmilli.com](#) — designed and built a fully functional online store for my handcrafted accessories brand, with the product catalog fetched from Etsy; also built the companion Shopify store
- [esheeesthetic.com](#) — designed, built and maintain the website for a skincare business

EDUCATION & LANGUAGES

Master's Degree in Computer Science — University of Radio Electronics, Ukraine

Languages: English (full professional), Ukrainian (native)
